

AMENDMENTS TO THE DRAWINGS

The Applicants now amend the drawings of this application. Attached hereto is an Added/Replacement drawing sheet with the below proposed changes entered thereon.

Figure 4A

The Applicants propose added new Figure 4A which is based on and substantially identical to original Figure 4. Figure 4A is different in that, instead of the battery door 170 of Figure 4, Figure 4A includes a rectangle to serve as a symbolic representation of an "electrical interconnect device" for powering the tracking and display unit 120 from the handpiece battery 116. The original specification, Paragraph 39, discloses the existence of such a device. For purposes of identification, this device is labeled as element 169.
